

Mohit Patel

Senior Consultant | ETL / Informatica Developer | Data Engineering

Pune, India | patel.mohit14@gmail.com | +91 98257 19983 | [Linkedin](#)

PROFESSIONAL SUMMARY

Senior ETL and Data Analytics professional with 8+ years of experience delivering enterprise data integration, feed generation, legacy modernization, and data validation solutions across financial services, banking, retail/CPG, and infrastructure support domains. Strong hands-on expertise in Informatica PowerCenter, DB2 SQL, Oracle SQL, UNIX shell scripting, Autosys, Control-M, IDMC, data modeling, source-to-target mapping, reconciliation, and release delivery. Proven ability to translate business requirements into scalable ETL designs, migrate complex Mainframe API logic to distributed platforms, automate batch workflows, support SIT/UAT, and deliver production-ready solutions with strong ownership and client appreciation.

TECHNICAL SKILLS

- **ETL & Integration:** Informatica PowerCenter, IDMC, ETL Mapping Design, Source-to-Target Mapping, Workflow Manager, Workflow Monitor, Sessions, Transformations
- **Databases:** DB2 SQL, Oracle SQL, SQL Optimization, Views, Materialized Views, DBMS, Data Reconciliation, Data Quality Checks
- **Automation & Scheduling:** UNIX Shell Scripting, Autosys, Control-M, Batch Processing, Job Monitoring, Operational Alerts, Email Notifications
- **Delivery & Testing:** Requirement Gathering, Impact Analysis, Data Modeling, Unit Testing, SIT/UAT Support, Defect Analysis, Deployment, Release Documentation
- **Tools:** Bitbucket, Git, TeamCity, JIRA, ServiceNow, SAP BO, VMware, BigPanda, Avamar, NetBackup, Veeam

WORK EXPERIENCE

Senior Consultant

09/2024 - Present

Capgemini Pvt. Ltd. | Project: Morgan Stanley

Delivering financial-services data engineering initiatives focused on E-Delivery feed generation, Unified Middle Office modernization, distributed processing, and business-critical validation.

- Designed and developed E-Delivery ETL pipelines to generate calculation-driven feeds and deliver standardized output files to multiple downstream and cross-functional teams.
- Implemented Informatica PowerCenter mappings, sessions, workflows, DB2 SQL logic, UNIX scripts, and Autosys schedules to automate end-to-end feed generation and operational execution.
- Converted complex business calculations and source-to-target rules into reusable ETL components, improving maintainability and reducing dependency on manual processing steps.
- Led end-to-end delivery for the Unified Middle Office (UMO) project, covering requirement gathering, current-state analysis, data model review, development, deployment, and post-implementation support.

- Migrated complex Mainframe API business logic to a distributed SQL/UNIX-based platform, supporting application modernization and improving transparency of transformation rules.
- Performed detailed data validation, reconciliation, negative testing, defect analysis, and output comparison across Mainframe and distributed platforms to ensure migration accuracy.
- Contributed to Near Real-Time (NRT) and ODM matrix logic creation by partnering with business and technical stakeholders to finalize transformation rules and validation scenarios.
- Prepared implementation-ready deliverables, coordinated deployment activities, supported production readiness, and ensured smooth handover for monitoring and support teams.
- Received multiple client appreciations for ownership, analytical problem-solving, delivery quality, and successful execution of a complex migration initiative.

Senior Software Engineer

01/2023 - 09/2024

Wipro Ltd. | Project: Bank of America

Delivered Informatica development, SQL logic, production release support, and PowerCenter-to-IDMC migration coordination for banking data applications.

- Designed, developed, tested, and documented Informatica mappings for data loading with focus on dimensional data modeling, business transformation rules, and metadata-driven processing.
- Implemented mapping-level business rules to populate repositories and support reliable metadata management for reporting, analytics, and downstream consumption.
- Created Oracle SQL views and materialized views aligned with business requirements, improving structured data access for consuming teams.
- Developed UNIX scripts to automate Informatica workflow execution, operational pre/post-processing, and email notifications for execution status and exception handling.
- Prepared unit test cases, validated source-to-target data movement, documented test evidence, and supported defect resolution during SIT/UAT and release cycles.
- Served as primary point of contact for Informatica PowerCenter to IDMC migration activities, coordinating analysis, development alignment, validation, and stakeholder communication.
- Delivered multiple production releases by managing development tasks, preparing release documents, coordinating approvals, and supporting deployment activities.

Technology Analyst | ETL Informatica Developer

08/2019 - 01/2023

Infosys Ltd. | Project: PepsiCo as POT-TAD Legacy Team

Worked on enterprise ETL delivery for legacy-to-target integration, client requirement analysis, mapping development, workflow monitoring, and data load validation.

- Executed ETL processes using Informatica PowerCenter to integrate data from diverse source systems into target databases as per business and technical specifications.
- Gathered and interpreted client requirements to understand source structures, transformation rules, target layouts, dependencies, and validation expectations.
- Developed Informatica mappings using reusable components and multiple transformations to support scalable, maintainable, and auditable ETL processing.
- Created workflows using Workflow Manager and monitored executions using Workflow Monitor to ensure timely completion, failure analysis, and issue resolution.

- Validated data loads, investigated mismatches, supported defect fixes, and collaborated with cross-functional teams to stabilize deliverables across release cycles.

Senior System Engineer

06/2018 - 08/2019

Infosys Ltd. | Project: Intel Global Command Center Team

Supported enterprise infrastructure monitoring, incident management, automated job support, backup coordination, and operational continuity.

- Handled server alerts by logging and managing ServiceNow tickets generated through BigPanda and resolving incidents using documented knowledge articles and standard procedures.
- Supported virtual machines using VMware and performed backup-related activities using Avamar, NetBackup, and Veeam.
- Supported automated jobs in IXP and collaborated with automation teams to streamline repetitive operational tasks across IXP, SCOM, and McAfee ticket categories.
- Acted as an experienced resource during critical incidents, guided new joiners, and helped maintain process continuity during high-priority situations.

SELECTED PROJECT HIGHLIGHTS

- E-Delivery Feed Generation:** Built automated feed-generation workflows using Informatica, DB2 SQL, UNIX, and Autosys to support calculation-driven output delivery for downstream teams.
- Unified Middle Office Modernization:** Owned requirement analysis, data model review, distributed logic development, validation strategy, and deployment coordination.
- PowerCenter to IDMC Migration:** Supported migration planning, impact analysis, validation, release coordination, and stakeholder communication for Informatica modernization activities.
- Data Validation & Reconciliation:** Performed source-to-target validation, Mainframe-vs-distributed output comparison, negative testing, defect triage, and evidence documentation.

EDUCATION

B.Tech - Petroleum Engineering (Major in Downstream)

06/2014 - 06/2018

CGPA: 8.01

Pandit Deendayal Petroleum University
Gandhinagar, Gujarat, India

ACHIEVEMENTS

- Received multiple client appreciations in Morgan Stanley project for complex migration delivery and strong ownership.
- Awarded Insta Award twice for strong contribution and delivery impact.
- Awarded Delivery Ninja for consistent performance and outstanding commitment to work.
- Recognized for dedication and commitment during crisis situations.
- Received Townhall Certificate from client side for project contribution.
- Received outstanding performance rating in first-year evaluation.

CERTIFICATIONS

- ETL using Informatica - Infosys LEX Certificate
- Database Management System (DBMS) - Infosys LEX Certificate
- AWS Certified Cloud Practitioner
- Microsoft Certified: Azure Fundamentals
- Microsoft Certified: Azure Data Fundamentals
- Kanban Certification - Infosys LEX Certificate
- Infosys Global Agile Developer Certification - Infosys LEX Certificate

LANGUAGES

- **English** - Full Professional Proficiency
- **Hindi** - Full Professional Proficiency
- **Gujarati** - Native or Bilingual Proficiency
